Carport, Gate and Fence at Robina

A while back, we added a new Carport, Fence and Gate Entry to our client's home in Robina.

We built a secure double carport with an electric roller door, rendered brick fencing and a matching lockable pedestrian gate entry. The end product has provided additional privacy and security, while also adding an aesthetically pleasing "face-lift" to the home.

When a new Carport or Patio is added to a home, we believe it's essential to ensure the new structure matches the design and does not look like an afterthought. This involves careful material selection and matching as well as design and finishing considerations. We have mastered this process and it can be seen in the work we do.
