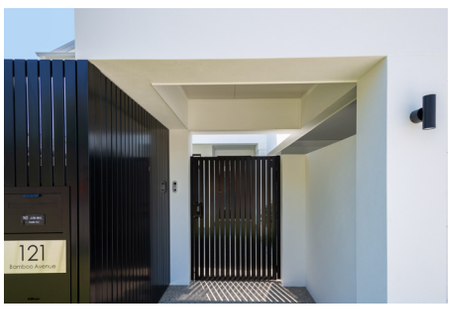
Rendered Modern Double Carport and Gate



We love building carports that are both functional and stylish. Recently, we built a magnificent double carport and Fence for our client in Benowa, and as you can see, the results are excellent.

Using the clean, modern colour scheme of black and white, the design for this structure incorporated clean straight lines, square edges and an architectural feel.

We used insulated roofing on top of a rendered brick structure for the double carport. Finished with low-profile box guttering, the carport also has a cantilevered gate house for pedestrian access. We supplied and installed the powder-coated aluminium pedestrian gate and fencing – all tying into the design direction of the home. The result is one large structure that is as impressive as it is practical.
